

Are battery energy storage systems safe?

---

This innovation is a major improvement for safer and more efficient energy storage solutions. Battery Energy Storage Systems are essential for the future of energy, but safety must always come first. Each of the safety standards relevant to BESS plays a unique role in ensuring the systems' safety, reliability, and performance.

What are the safety requirements for battery energy storage systems?

Test parameters: Fire and explosion risks are among the most critical safety concerns in battery energy storage systems, especially where thermal runaway and gas release are possible. These standards address both preventive measures and protective design strategies to reduce the likelihood and impact of fires or deflagrations.

Are new energy storage systems safe?

Interest in storage safety considerations is substantially increasing, yet newer system designs can be quite different than prior versions in terms of risk mitigation. An uncontrolled release of energy is an inevitable and dangerous possibility with storing energy in any form.

Are energy storage systems dangerous?

In general, energy that is stored has the potential for release in an uncontrolled manner, potentially endangering equipment, the environment, or people. All energy storage systems have hazards. Some hazards are easily mitigated to reduce risk, and others require more dedicated planning and execution to maintain safety.

What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

What is a stationary battery energy storage system?

Stationary battery energy storage systems (BESS) have been developed for a variety of uses, facilitating the integration of renewables and the energy transition. Over the last decade, the installed base of BESSs has grown considerably, following an increasing trend in the number of BESS failure incidents.
