What equipment do you need to go solar?

To go solar, you'll need solar panels, inverters, racking equipment, and performance monitoring equipment at a minimum. Depending on where you live, you may also consider a solar battery. The components of a solar panel system are pretty simple.

What is a solar panel system?

Solar panel systems are often referred to as PV, or photovoltaic, solar power systems. The home installation of a high-quality solar power system can reduce or eliminate dependence on the utility power grid that supplies electricity to light, heat, cool, and operate your home.

What is a home solar system?

A home solar system is a common way to lower energy costs and adopt sustainable living. Harnessing the sun lets you become energy-independent from power companies. You also contribute to an eco-friendly practice of lessening valuable resources used to generate electricity. This guide will dissect solar system operation.

What is rooftop solar energy?

Generating rooftop solar energy is a simple process in which solar panels convert sunlight into direct current (DC) power that can be delivered to a home's power system. However, most homes and businesses are wired to use alternating current (AC) power.

What is a roof-mounted solar panel system?

A roof-mounted solar panels system absorbs and converts the energy-packed photons of natural sunlight into a usable energy form. Solar panel systems are often referred to as PV, or photovoltaic, solar power systems.

What is a small Solar Home system?

That's the magic of a small solar home system. These compact, affordable setups bring energy independence to tiny homes, remote cabins, rural houses, and even serve as a lifeline during emergencies. If you're tired of rising utility costs, live off the grid, or simply want a sustainable backup, this guide is for you.
